CARE AND MAINTENANCE

EASY Ergonomic Ceramic Basin with Overflow

B&M SKU: **ID10191** Idral code: **10191**

Routine cleaning

1. Rinse loose dirt with clean water.

2. Wipe with a soft cloth or non-abrasive sponge using warm water and a small amount of mild pH-neutral cleaner.

3. Rinse thoroughly so no cleaner remains on the product or plumbing components.

4. Dry with a clean soft cloth to reduce water marks and limescale deposits.

Avoid

Abrasive powders or pads; wire wool; gritty cleaners; strong acids or alkalis; drain cleaner on exposed surfaces; undiluted bleach; solvents; paint removers; metal scrapers; heavy impact; and sudden extreme temperature changes.

Ongoing checks

Inspect sealant, wall or countertop fixings, support components, the waste and siphon/trap periodically. Repair failed sealant, corrosion, loose components and leaking connections promptly. Do not stand or place excessive loads on the product.

Metal assembly care

For ID10191PLT, keep the galvanized support dry and clean. Do not use corrosive chemicals. Check structural fasteners and the adjustment mechanism periodically and remove the assembly from service if movement, deformation or corrosion is found.

Retain the official technical specification and proof of purchase. Damage caused by unsuitable cleaners, impact, incorrect installation or incompatible components is not a manufacturing defect.
